- 2 This book is one of the results of a research project on the transition to a market economy in Central Asia, conducted by the Institute of Developing Economies with extensive field research. Not all of the authors are specialists on Central Asia, and the levels of included articles are varied, but still the book contains a lot of useful information and presents views different from those of European, American and

Central Asian scholars. Among others, Iwasaki analyzes what has changed and what has not changed in relations between the government and industrial enterprises in Uzbekistan. On the basis of micro data, he shows that the Soviet system of industrial management by the government has been reorganized but not entirely abolished, and the administrative office of the economic union of each industrial sector even more strongly controls enterprises than did its predecessor in the Soviet times.
