- 1 In this paper archaeological records from the site of Tomb-e Bot are preliminary presented with the aim of assessing the continuity existing between the Achaemenid tradition and the artistic production of the centuries that followed the end of the Achaemenid Empire. Tomb-e Bot is located in South Fars, and excavation revealed a major phase of occupation starting in post-Achaemenid times and spanning from the Parthian to the Sasanian age. The site was selected for investigation further to a ground survey among dozens of sites recorded by the general survey of southern Fars region for providing answers to outstanding questions on ancient Iran. Surface material was systematically collected and architectural remains recorded that still reveal a clear Achaemenid influence; an influence that effected probably also religious beliefs and developed among local groups of settlers in the opinion of the Author.
