Strategies of China's Maritime Actors in the South China Sea

A Coordinated Plan under the Leadership of Xi Jinping?

SHINJI YAMAGUCHI

ABSTRACT: This paper aims to explore the coordination among China's various maritime actors in the South China Sea (SCS). Since around 2009, China has reinforced its maritime territorial claims in the SCS and has taken coercive measures, including harassing other countries' vessels and using administrative tools to expand its effective control over disputed islands. One important question is whether China's tactics are based on a well-coordinated plan or are the unintended consequence of competition and self-interest among the various agencies. This paper shows that, firstly, organisational coordination between these agencies is improving, secondly, that the PLA has a salient role in the operation, and lastly, that the long-term trend is important. The paper implies that long-term aspirations are coalescing into more concrete plans under the strong leadership of Xi Jinping.

KEYWORDS: China, Xi Jinping, South China Sea, land reclamation, maritime disputes, oil rig, PLA, Maritime Militia.

Introduction ⁽¹⁾

Since around 2009, China has reinforced its maritime territorial claims in the South China Sea (SCS) and has tried to deter other states from strengthening their claims at China's expense. China has employed a range of diplomatic, administrative, economic, and military tactics to expand its effective control over disputed territories.⁽²⁾

Are China's tactics based on a well-coordinated plan, or are they the unintended consequence of competition and self-interest among various agencies? Do China's maritime actors compete for their own narrow interests to an extent that could disrupt China's overall strategy? Or are these actors working under the broad policy direction of the Chinese Communist Party (CCP)? Also, what is the role of the People's Liberation Army (PLA) in the SCS? These are questions that this paper will try to answer.

There are two views on the questions. In one of her recent papers published in 2014, Linda Jakobson argues that China's actions in the maritime domain take place unsystematically and organically rather than as part of a grand strategy. Various actors cooperate when it serves both parties' interests, and "there is no evidence of a central government approved grand plan that mandates different actors coercing other claimants in a tailored way."⁽³⁾ On the other hand, Bonnie Glaser argues that China's various maritime actors are increasingly coordinated and directed by senior policymakers as part of a larger strategy aimed at protecting China's sovereignty and maritime rights.⁽⁴⁾

This paper argues that although coordination problems did exist in the Hu Jintao era, as detailed in Jakobson's works, coordination among maritime actors has been improving, especially under the Xi Jinping administration. Of course, this is not to say that Xi Jinping has overcome all of the problems in China's political system at once, but the development of coordination is an important trend deserving further exploration.

The questions are part of a broader debate on China's political system. Since the 1990s, China's political system has been frequently referred to as "fragmented authoritarianism" in which authority at the very peak of the Chinese political system is centralised, but the layers below it are fragmented and disjointed.⁽⁵⁾

Lampton, (eds), *Bureaucracy, Politics, and Decision Making in Post-Mao China*, Berkeley and Los Angeles, CA, University of California Press, 1992, pp. 1-30.

There is wide consensus among scholars about the complex nature of the Chinese political system, but sometimes researchers differ on which aspect they emphasise.

The first view puts an emphasis on fragmentation. Since the system is fragmented, it will be difficult for the central leadership to control all actions of the agencies. As a result, coordination among China's agencies tends to be poor.⁽⁶⁾ The second view stresses that even though China looks different from its Maoist past, "democratic centralism," an organisational principle of the CCP, has not essentially changed, and China therefore somehow maintains coherence on important policy issues.⁽⁷⁾ This paper adds insight to this debate.

Here we face at least two analytical problems: lack of information and the complex nature of China's strategy. It is not easy to know the consequence of poor coordination or observe the causal relationship between poor coordination and a particular behaviour. Moreover, China's strategy tends to be expressed in vague ways and sometimes contains contradictory elements, as a result of which it is very difficult to obtain information that ascertains which action by an agency truly deviates from national policy and which does not.

There is no easy way to overcome these analytical problems, but the paper will focus on Xi Jinping's power consolidation and institutional reforms that imply greater coordination, as well as the actual behaviour of maritime actors that indicate cooperation among actors. Each type of evidence is partial, but when combined this evidence strongly suggests the development of deeper coordination among maritime actors.

The first section summarises the maritime actors that this paper deals with, including the State Oceanic Administration/China Coast Guard, local governments, the China National Offshore Oil Corporation (CNOOC), Maritime Militia (*Haishang minbing* 海上民兵), and PLA Navy (PLAN). These actors have their own institutional history, interests, and characteristics. The second section will analyse efforts to improve coordination under Xi Jinping: power consolidation and his personal initiative, institutional reform, and inter-agency relations.

The last two sections present two detailed case studies: the oil rig incident that occurred in 2014 near the Paracel Islands, and island reclamation works that China is currently conducting in the Spratly Islands.

China's main maritime actors

China's political system has many organisations related to the maritime domain, and each of them is under a different chain of command. Coordination between these organisations is sometimes poor, given the lack of close coordination among the chains of command.

Maritime law enforcement agencies

Before 2013, there were five civilian law enforcement agencies under independent chains of command, including: China Marine Surveillance (CMS) (*Zhongguo haijian* 中国海监) under the State Oceanic Administration (SOA) (*Guojia haiyangju* 国家海洋局) of the Ministry of Land and Resources; the Fishery Law Enforcement Command (FLEC) (*Zhongguo yuzheng* 中国渔政) of the Ministry of Agriculture; the China Maritime Police (*Zhongguo haijing* 中国海警) under the Border Control Department of the Ministry of Public Security; the Maritime Safety Administration (MSA) (*Haishiju* 海事局) of the Ministry of Transport; and the General Administration of Customs (*Haiguan zongshu* 海关总署). Among them, the CMS and FLEC were especially active in China's law enforcement activities and became the vanguard of China's sovereignty claims.

Local governments

Local governments, including the provincial and prefectural levels, are the primary implementers of general administration in the SCS. First, provincial governments, including those of Hainan, Guangdong, and Guangxi, have direct responsibility over managing administrative and economic activities in the SCS. Hainan Province in particular administers all of the nation's land and sea claims in the SCS. These activities include law-enforcement, constructing infrastructure, logistics, organising maritime militia, and so on.

Second, in 2012, Beijing established Sansha City (*Sansha shi* 三沙市), a prefectural-level city in Hainan Province located on Woody Island, part of the Paracels. Sansha City is in charge of administering all SCS features, implying Beijing's intention to enhance actual control over disputed islands and shoals. We will explore this issue later.

Maritime Militia

In China, the militia are under the dual command of the State Council and Central Military Commission. In coastal areas, the local governments and military have established a Maritime Militia. The Maritime Militia is a dual-hatted force of specially registered fishing vessels with crews of fishermen-soldiers.⁽⁸⁾ The PLA General Staff Department's mobilisation department oversees and formulates regulations for nationwide militia work. At the levels of provincial military districts and sub-districts, militia are organised and trained under the People's Armed Forces Departments of local governments. The National Defence Mobilisation Committee coordinates local governments and the military. The mission of the Maritime Militia includes military logistical support, reconnaissance, and participation in combat.

CNOOC

The China National Offshore Oil Corporation (CNOOC), one of the 116 centrally-controlled state-owned enterprises under the State-Owned Assets Supervision and Administration Commission of the State Council, was incorporated on 15 February 1982. The CNOOC is responsible for the exploration and development of Chinese offshore oil and gas resources. The top executives of the CNOOC are appointed by the CCP, so the Party maintains tight control over the CNOOC.⁽⁹⁾

The CNOOC has long had the ambition of expanding oil-exploration activities in the SCS. The CNOOC advocates a "Second Leap Forward Program" for developing the maritime oil industry.⁽¹⁰⁾ In 2011, the CNOOC Party group (*dangzu* 党组), the Party cell in the company that is the de facto supreme decision-making body, promulgated "Guidelines for the Second Leap Forward Program (2011-2030)," which outlined steps to develop the company. According to the program, the first step (2011-2020) involves the CNOOC becoming a first-rate international energy company, while the second step (2021-2030) sets the goal of the CNOOC becoming a comprehensive global company with soft power. In this context, the CNOOC seeks to increase offshore production with an emphasis on the deep waters of the SCS.

Technological advances have expanded the CNOOC's ability to exploit offshore resources. The CNOOC has invested large amounts of money in building its own deep-water drilling capabilities. Its latest platform, HYSY981, can operate in depths of up to 3,000 meters. The project was started in 2006 as part of the 863 Program (China's high-tech state-led development plan). The platform has multiple functions, including exploration, digging, and mending wells, and is equipped with the DP-3 dynamic positioning system and a satellite navigation system.⁽¹¹⁾

PLA Navy

The situation in the SCS is not fully militarised yet, given that the PLAN has not engaged in direct confrontation with others, but it has supported other organisations' activities in the SCS in various ways. As China's 2012 Defence White Paper noted, "The PLAN provides security support for China's maritime law enforcement, fisheries, and oil and gas exploitation. It has established mechanisms to coordinate and cooperate with law-enforcement organs of marine surveillance and fishery administration, as well as a joint military-police-civilian defence mechanism."⁽¹²⁾

According to Christopher Yung, the PLAN has formed a "Naval lobby" to advocate for a more proactive maritime policy, and is often very effective in coalition building. As an effective bureaucratic player, the PLAN has substantial if not decisive influence on national policy-making.⁽¹³⁾

A report by the National Institute for Defense Studies (based in Tokyo) stated that the PLA has become especially proactive regarding the drafting of legislation relating to the seas. The report shows that since around 2000, PLA delegates in the NPC have been calling for policy priority to be assigned to maritime issues by submitting proposals and suggestions to the NPC.⁽¹⁴⁾

Cooperation between maritime actors

The Xi Jinping factor

Xi Jinping's power consolidation has contributed to improving coordinated decision-making on maritime issues. After Xi Jinping took office in 2012, he quickly consolidated power through an anti-corruption campaign, arguably establishing the highest authority since Mao Zedong.⁽¹⁵⁾

In China's political system, the supreme leader has a preeminent role in foreign and security policy decision-making processes due to the "three-in-one" principle.⁽¹⁶⁾ Since 1989, the CCP general secretary has also held the positions of Central Military Commission chairman and PRC president.

Xi's policy on maritime territorial disputes and emphasis on maritime power are factors that have facilitated China's more "assertive" foreign policy since around 2009. At the 18th Congress of the CCP in November 2012,

Hu Jintao read out the work report that outlined the overall direction of policies for the next generation of leaders. Xi participated in drafting the report. The work report stated, "We should enhance our capacity for exploiting marine resources, develop the marine economy, protect the marine ecological environment, resolutely safeguard China's maritime rights and interests, and build China into a maritime power."⁽¹⁷⁾ The sentence clearly indicates the increased importance the Party places on maritime issues. At the 8th Politburo study session in August 2014, Xi called for efforts to learn more about and further manage maritime development.⁽¹⁸⁾

Institutional reforms

As maritime territorial disputes are becoming a top agenda item, the CCP is making an effort to improve the decision-making structure and co-operation among agencies. Especially since becoming general secretary of the CCP, Xi Jinping has emphasised top-down decision-making and the importance of the maritime domain, and this has contributed to more centralised decision-making on maritime issues through the creation of the Central Maritime Rights Protection Leading Small Group, the establishment of the National Security Commission, the endorsement of defence and military reform, and the consolidation of maritime law enforcement agencies.

Creating the Central Maritime Rights Protection Leading Small Group (*lingdao xiaozu* 领导小组)

The CCP Politburo and its Standing Committee have advisory bodies known as "leading small groups."⁽¹⁹⁾ The groups seem to be under the direct control of the Central Committee of the CCP, and the members are selected

from relevant sections of the Party, the government, and the PLA, depending on the issues a group is responsible for. Their concrete responsibilities are considered to be providing information and recommendations, and coordination, formation, and supervision of policies.⁽²⁰⁾ The Central Maritime Rights Protection Leading Small Group, headed by Xi Jinping, was formed in 2012. The functions of the group are: 1) to formulate strategies to advance China's maritime rights and interests; 2) to coordinate policy among numerous state entities in charge of maritime affairs; and 3) to manage growing conflict with other countries over disputed maritime territories.⁽²¹⁾

Establishing the National Security Commission (*Zhongyang guojia anquan weiyuanhui* 中央国家安全委员会)

The National Security Commission was established at the Third Plenary Session of the 18th Central Committee in November 2013. According to a communiqué issued after the session, the purpose of this committee is to improve China's national security system and strategy to safeguard the country.⁽²²⁾ General Secretary Xi Jinping stated that China had to establish a powerful agency to consolidate and control all national security activities in the relentless foreign and domestic security environment. He then explained that this would strengthen centralised and unified leadership in the national security field and that it was an urgent business.⁽²³⁾

Endorsing defence and military reform

Xi Jinping embarked on the largest military reform plan since the establishment of the PRC, significantly enhancing Xi's authority over the military. In November 2013, Xi announced a comprehensive reform plan that included defence and military reform.⁽²⁴⁾ After two years of preparation, Xi announced an overall military reform plan that included cuts of 300,000 troops, the creation of a Ground Force Headquarters, Rocket Force, and Strategic Support Troops, transformation of seven military regions into five theatre commands, and the abolishment of four General Departments.⁽²⁵⁾

The aims of the reform are to turn the PLA into a more effective fighting force and to enhance political control over the military. In order to do so, Xi has tried to concentrate power in his own hands. In January 2016, the four General Departments were abolished, and their functions were divided among 15 functional departments within the Central Military Commission. As chairman of the Central Military Commission, Xi holds more power over the PLA than his predecessors. Moreover, Xi now bears the title of "Commander-in-Chief of the military's Joint Operations Command Centre," which implies that he has operational authority over the PLA.⁽²⁶⁾

Consolidation of maritime law enforcement agencies

The Chinese government announced at the National People's Congress (NPC) in March 2013 that it would establish the State Oceanic Commission as the high-level coordination body and a renewed SOA consolidating the organisations and responsibilities of the previous CMS, Maritime Police, FLEC, and General Administration of Customs. The responsibility, organisation, and formation of the new SOA were announced in June 2013, and the department of China Coast Guard (CCG) (*Zhongguo haijingju* 中国海警局) was established within the SOA. The newly established department of the CCG as the headquarters of the CCG and the CCG Command Centre is in charge of drafting systems and measures for the enforcement of maritime law, proposing various regulations, coordinating the joint command of maritime law enforcement activities by CCG units, and training units of the CCG. The consolidation is expected to improve the effectiveness of China's law enforcement activities at sea.⁽²⁷⁾

Still, there are some unclear points concerning the organisation and command structure of the new agency. First, the organisational structure

of the SOA and CCG is complicated. For example, regulations for the governance of the seas and law enforcement are drafted by the SOA, and are ultimately authorised and promulgated by the Ministry of Land and Resources after examination. On the other hand, maritime law enforcement activities implemented under the name of the CCG require the operational guidance of the Ministry of Public Security, and the commander of the CCG is a former vice-minister of the Ministry of Public Security.⁽²⁸⁾

Second, it is also unclear who actually controls the new SOA and CCG. In terms of high level decision-making, although the announcement in March 2013 stated that the State Oceanic Commission would function as the high-level coordination body, there is no evidence that the commission is active. On the operational level, at first glance, it seems that the Ministry of Public Security has the upper hand, given its responsibility to guide the operations of the CCG. However, the fact that generals from the People's Armed Police, the organisation in charge of domestic security that is under the dual command of Central Military Commission and State Council, have taken important positions in CCG may indicate that the PLA has influence over the CCG.⁽²⁹⁾

Inter-agency relations

Although organisational competition does exist, China is making an effort to improve coordination between agencies. These efforts, which include bi-lateral meetings and exercises, contribute to actual coordinated operations.

The PLAN and the SOA have a close relationship. For example, they reached an agreement to cooperate on research and education in 2009, and have held regular meetings since then.⁽³⁰⁾ Moreover, the commanders of the CCG are apparently trained at the Nanjing Naval Command College.⁽³¹⁾ The Ministry of National Defence website reported that the PLAN actively cooperates in joint rights protection activities with law enforcement bodies.⁽³²⁾

Hainan Province and the SOA have also developed cooperation and exchanges. Liu Cigui 刘赐贵, director of the SOA from January 2011 to December 2014, held meetings with Hainan provincial Party secretary Luo Baoming. Liu Cigui became governor of Hainan Province in February 2015⁽³³⁾ in a personnel reshuffle that could contribute to further cooperation. When Liu Cigui visited the SOA and met with director Wang Hong in March 2015, they expressed their joint contribution to SCS undertakings.⁽³⁴⁾

Cooperation between the CNOOC and the State Oceanic Administration also seems to be improving. In February 2014, Wang Yilin visited the SOA and met with then-director Liu Cigui, while Liu visited the CNOOC in May 2014. Liu and Wang expressed their wish for the SOA and CNOOC to cooperate in building maritime power.⁽³⁵⁾ Wang said the CNOOC would reliably carry out various projects, along with the related requirements of the SOA. Deployment of China Coast Guard vessels to protect oil rigs is another instance of improved coordination.

As discussed later, it is especially important to emphasise the role of the PLA and local governments in coordinating the operations of maritime actors. Linda Jakobson notes that when the PLA takes a leading role in maritime operations, a higher level of cooperation between actors can be achieved.⁽³⁶⁾

There are numerous examples showing that these agencies actually cooperate well in both well-planned and contingency operations. For example, in October 2012, the PLAN and CCG conducted joint exercises in the East China Sea.⁽³⁷⁾ In addition, the Impeccable Incident in 2009 showed that the PLAN, law enforcement agencies, and Maritime Militia were highly coordinated in their actions to harass the USNS Impeccable.⁽³⁸⁾ In 2012, China successfully seized and occupied Scarborough Shoal after a 10-week standoff with the Philippines. During the standoff, dozens of government vessels and fishing boats floated in dangerously close proximity to the reef.⁽³⁹⁾ Among these various examples, I have selected the oil rig incident in 2014 and the land reclamation in Spratly Islands, because they are landmarks in China's policy in the SCS that have led to the current level of tension.

Case study I: The oil rig incident

On 2 May 2014, the CNOOC placed the Haiyang Shiyu 981 海洋石油 981 (HYSY981) deep water semi-submersible drilling rig roughly 17 nautical miles south of Triton Island and 120 nautical miles off the coast of Vietnam. The CNOOC oil rig was accompanied by ships from the China Coast Guard, Maritime Militia, engineering experts, and PLA Navy ships. In response, Vietnam dispatched naval and coast guard vessels to the area, and Chinese and Vietnamese vessels repeatedly collided in the disputed waters.⁽⁴⁰⁾ This incident was remarkable because it was the first time China drilled in the EEZ

claimed by another nation without permission.⁽⁴¹⁾ Although the CNOOC had originally announced that the oil rig would drill until August 15, it was withdrawn in mid-July as bad weather approached.

Three factors affecting China's move illustrate the cooperation among maritime actors under the leadership of Xi Jinping: the CNOOC's aspiration to exploit deep waters in the SCS, law enforcement agencies' push for protecting and strengthening sovereignty claims, and Xi Jinping's call for establishing China as a "major maritime power" (*haiyang qiangguo* 海洋强国).⁽⁴²⁾

First, as noted in the previous section, the CNOOC has long aspired to expand oil-exploration activities in the SCS. But the CNOOC has not solely pursued its own program without regard to other actors. A 2012 International Crisis Group report stated that Chinese oil companies are hesitant to conduct expensive drilling operations near countries embroiled in territorial disputes with Beijing because, "If anything happens on the rig those countries won't help us."⁽⁴³⁾

In 2012, CNOOC chairman Wang Yilin claimed that HYSY981 is "movable national territory" and a strategic tool to drive development of the maritime petroleum industry, which will contribute to achieving China's energy se-

curity, developing its maritime power strategy, and protecting sovereignty in territorial waters.⁽⁴⁴⁾

Wang Yilin emphasised that Xi's remarks on major maritime power provide new opportunities, new missions, and new requirements and that the maritime oil industry should become a main force in constructing Chinese maritime power. Wang also emphasised that the CNOOC would enhance its deep-water strategy, arguing that "deep water is not only an important alternative area for [China's] oil and gas resources, but also a front position for protecting [China's] maritime rights."⁽⁴⁵⁾

Second, there has been a strong perception among various Chinese agencies that neighbouring countries have taken advantage of China's desire to avoid conflict over disputed claims. Liu Cigui, Director of the SOA, reiterated in a speech at the Central Party School that "we are facing a severe situation in protecting maritime rights at the periphery. Generally speaking, maritime resources are deprived, maritime areas are cut gradually, islands are occupied, strategic sea lanes are threatened, and confrontations around the peripheral area are exploding."⁽⁴⁶⁾ An article in the SOA's official newspaper mentioned that China has concentrated its oil exploration efforts in shallow waters so far, and has not done enough exploration in deep waters in the SCS. The article argued that "some waters were explored by other neighbouring countries that are challenging our sovereignty in the territorial waters. China has consistently proposed a principle of 'shelving disputes and joint development,' (*gezhi zhengyi, gongtong kaifa* 搁置争议, 共同开发), but some neighbouring countries have not taken it into consideration and are scrambling to take the lead in exploitation."⁽⁴⁷⁾ Based on such perceptions, proposals to adopt a more proactive approach have become increasingly salient.

Third, Xi Jinping has strongly endorsed deep water maritime oil-exploration in the SCS. Xi supported and ordered the CNOOC to put its oil rig in Vietnamese waters. It would certainly be wrong to assume that the CNOOC deployed HYSY981 in 2014 *against* the will of the Party leadership.

Given the involvement of the CCG and PLA Navy ships, Xi must have known about the decision to deploy the HYSY981. Given his leadership style and role as the head of the Central Maritime Rights Protection Leading Small Group, Xi likely made the decision to approve deployment of the rig.⁽⁴⁸⁾ Erica Downs argues that China's oil companies require the permission of the Ministry of Foreign Affairs and most likely of top leaders to operate in these waters.⁽⁴⁹⁾ *Asahi Shimbun* reported that the CNOOC obtained permission from the Party leadership to deploy the oil rig in Vietnamese waters around the beginning of 2014.⁽⁵⁰⁾

Case study II: Land reclamation

Since around summer 2014, China has conducted massive scale land reclamation and installation construction at seven features in the Spratly Islands, including Johnson South Reef, Cuarteron Reef, Gaven Reef, Fieri Cross Reef, Subi Reef, Mischief Reef, and Hughes Reef.

Although there is no special rule in international law that specifically prohibits any state from undertaking reclamation at sea, and although China is never the only country conducting land reclamation in the SCS, the speed, scale, intensity, and remoteness of China's ongoing manufacturing of land and infrastructure within the SCS have no parallels in history. US Navy admiral Harry Harris commented, "China is creating a great wall of sand with dredges and bulldozers."⁽⁵¹⁾

Purpose

What is the aim of these reclamation works? There are several possible goals for the project: strengthening sovereignty claims, improving living condition of local residents, contributing to the security of international navigation, and enhancing military power projection.

First, strengthening sovereignty claims is undoubtedly a crucial factor explaining China's behaviour. It is doubtful that islands created from submerged shoals constitute a basis for sovereignty claims, as a low-tide elevation creates no territorial sea, EEZ, or continental shelf, and cannot be claimed as territory in its own right.⁽⁵²⁾ Besides legal arguments, however, creating features in the sea contributes to an enhanced presence in the area. Although China has not admitted that the purpose of land reclamation is to strengthen sovereignty claims, China's presence in the Spratlys has been growing.

Second, China's diplomats and spokespersons have categorically asserted that the main purpose of land reclamation and installation building is for civilian use. Liu Zhenmin, Vice-Minister of Foreign Affairs, explained that the purposes of reclamation are multi-dimensional, but are mainly for civilian purposes.⁽⁵³⁾ Ouyang Yujing, director-general of the Department of Boundary and Ocean Affairs of the Ministry of Foreign Affairs, also mentioned that it aimed first and foremost at improving living conditions for personnel stationed there.⁽⁵⁴⁾

Third, China asserts that constructions contribute to its international responsibilities. Cui Tiankai, ambassador to the United States, told an interviewer that "the main purpose is to improve the functions of facilities there so as to provide services to ships of China, neighbouring countries and other countries that sail across the SCS. Such services will include shelter for ships, navigation aid, search and rescue, marine meteorological observation, fishery service and many others."⁽⁵⁵⁾

Last but not least, land reclamation and installation construction, especially the construction of airstrips, ports, and radar facilities, would strengthen the PLA's power projection capabilities in the SCS, which were clearly limited in the past. Massive construction of airstrips would enable the PLA Air Force (PLAAF) to take action around the Spratlys, and PLA aircraft might therefore be able to cover all of the SCS. Such expansion of activities raises arguments and concerns over the establishment of a new Air Defence Identification Zone (ADIZ) in the South China Sea. At the National People's Congress in 2014, non-military representatives proposed establishment of the SCS ADIZ, and the Ministry of Defence (MOD) did not deny this possibility.⁽⁵⁶⁾

Moreover, construction of airstrips and the enhanced power projection capability of China's Air Force could have implications beyond the SCS. According to *Kanwa Defence Review*, the airstrips are designed to be used by the H-6K bomber, a new type of H-6 bomber equipped with a CJ-10 air-to-land cruise missile with an attack range of over 2,000 km. In 2015 China conducted its first Air Force drill in the western Pacific. At that time, several H-6K bombers passed through the Bashi Channel. Such activities may increase as a consequence of airstrips construction in the SCS.

Decision-making and implementation

It is still unclear when and by whom reclamation projects in the Spratlys have been decided. The Asia Maritime Transparency Initiative and other media report that it was in summer 2014 that large-scale reclamation started on some reefs. In June 2014, *South China Morning Post* reported that China would expand its biggest installation in the Spratly Islands into a fully-formed artificial island, complete with airstrip and seaport, and other researchers and media started to keep an eye on it.⁽⁵⁷⁾ But according to *IHS Jane's Defence Weekly*, China's large dredger ship began to appear around the Spratlys in September 2013.⁽⁵⁸⁾ According to Andrew Erickson, reclamation and construction of the Johnson South Reef probably started around 2012.⁽⁵⁹⁾

Given the scale and timing of the projects, it is highly likely that Xi Jinping decided the endorsement of the projects. *Kanwa Defence Review* reported in 2014 that it was Xi Jinping himself who approved and endorsed the reclamation.⁽⁶⁰⁾ Likewise, Lee Shiyin-jow, director-general of Taiwan's National Security Bureau, stated that China's land reclamation is taking place on seven shoals, and that at least five of these have been carried out under the personal orders of Xi Jinping.⁽⁶¹⁾ It is unclear why he mentioned only five, not seven, but it is likely that Xi decided the project as a whole.

Although puzzling, it seems that China's land reclamation effort began around 2012, but at a scale and speed not noticeable enough for foreigners to take notice. The scale and speed has increased notably especially since 2014, probably due to strategic decisions made by Xi Jinping.

The PLA, especially the PLAN, is likely taking a central role in implementing the land reclamation program. According to media reports, in September 2014, PLA Navy Commander Wu Shengli inspected the island reclamation projects for a week.⁽⁶²⁾ When asked about the inspection tour, an MOD spokesperson answered briefly that China's activities on the islands were "rightful."⁽⁶³⁾ In addition, PLAN vessels guarded the construction site,⁽⁶⁴⁾ and a company that made 120 armoured nozzles for dredging revealed that it was the PLA that ordered the nozzles.⁽⁶⁵⁾

China has dispatched many engineering ships and a large amount of equipment, most notably the dredger ship Tian Jing. Tian Jing was designed by Shanghai Jiaotong University and Germany's Vosta LMG, built by China

Merchant Industry Holdings Ltd., and is now operated by CCCC Tian Jing Dredging. Construction of the ship, the biggest and the most capable dredger ship in Asia, began in April 2008 and was completed in January 2010.⁽⁶⁶⁾ As noted above, Tian Jing began its operations in the Spratlys in September 2013, and has rotated among Cuarteron Reef, Johnson South Reef, Fiery Cross Reef, and Gaven Reef.

Building administration of Sansha City

The current land reclamation efforts in the Spratlys are not China's first attempt to enlarge islands; China has carried out land reclamation and port construction in the Paracels since 2012. In 2012, the SOA approved a plan by the Ocean and Fishery Agency of the Hainan provincial government to enlarge Drummond Island and construct a port on the island.⁽⁶⁷⁾

Land reclamation is part of a broader effort to create Sansha City, a strategic decision by the Party. In a broader perspective, Hainan Province and Sansha City have become increasingly important because local governments are charged with establishing administrative control and improve the living condition of residents.

Other factors in building administrative control over Sansha City, including maritime law enforcement agencies, maritime militia, and surveillance networks, would contribute to enhancing China's greater control of the Paracels and Spratlys. First, the Sansha City government has become an important actor in coordinating maritime law enforcement activities. In Sansha City, "military-police-civilian coordination" (*junjingmin xietiao* 军警民协调) has become a key phrase. According to Xiao Jie, the Mayor of Sansha City, Sansha has set up a Military-Police-Civilian Coordination Centre, and has conducted a "Six-One Project" and a "Five-in-One-Place Project."⁽⁶⁸⁾ The

Six-One Project refers to a plan to establish six things: joint maritime defence duty room, information sharing platform, maritime law enforcement rotation plan, joint maritime law enforcement plan, gradual participation of justice in the law enforcement mechanism, and maritime militia troops. The Five-in-One-Place Project refers to the establishment of a residential committee office, maritime militia post, residential cultural centre, temporary typhoon shelter, and war time command centre on the reefs where the residential committee exists.

Xiao Jie emphasised that Sansha City basically carried out regular patrols and law enforcement in the Paracels. On 6 January 2015, Sansha City conducted a military-police-civilian maritime general law enforcement exercise.⁽⁶⁹⁾ The exercise included training for inspection of foreign engineering ships and search and rescue.

Sansha has set up a General Law Enforcement Bureau that conducts integrated law enforcement activities. When the Maritime Militia discovers "illegal" activity by foreign fishing vessels, it reports it to the Sansha Garrison Command, which then identifies the location of the activity and notifies law enforcement vessels.⁽⁷⁰⁾

Second, in Hainan Province, building and strengthening the Maritime Militia has become an important task for local governments. When Xi Jinping made an inspection tour of Hainan Province in April 2013, he demanded that Hainan Province fulfil four aims in the SCS entrusted to it by the Party Centre, namely protecting rights, protecting stability, preserving the maritime environment, and development (*weiquan, weiwen, baohu, kaifa* 维权, 维稳, 保护, 开发).⁽⁷¹⁾ Xi also met with the maritime militia of Tanmen Township and demanded that maritime militias actively collect information in the far seas and support the construction of reefs.⁽⁷²⁾

In response to Xi's demands, Luo Baoming on August 2013 emphasised the importance of the Sansha construction and mentioned "development based on civil-military integration, realising the Party Centre's strategic intention to set up Sansha City, and fulfilling the divine mission of rights protection, maintaining stability, protecting the environment, and development."⁽⁷³⁾ The Sansha City construction has now become a high-priority project in Hainan. According to Andrew Erickson and Conor Kennedy, Sansha's first 28 infrastructure projects involved a total investment of 24 billion renminbi (US\$3.81 billion), with much more yet to come.⁽⁷⁴⁾

In July 2013, Sansha City established a People's Armed Forces Department and Maritime Militia.⁽⁷⁵⁾ The Sansha Maritime Militia consists of more than 215 people, and one of its major missions is collecting information, as Xi Jinping required.⁽⁷⁶⁾ The lower-level People's Armed Forces Department was already established at Woody Island, Crescent Group, and Qilanyu (northern part of Amphitrite Group) in the Paracels, as well as in the Spratlys by December 2014.⁽⁷⁷⁾ Third, Hainan Province and Sansha City are constructing a surveillance and information network in the SCS. In July 2015, the Hainan Military District built dozens of militia outposts and created a reconnaissance-information network.⁽⁷⁸⁾ Moreover, Sansha City established informatised militia outposts equipped with a radar identification and surveillance system to transmit information to the Military-Police-Civilian Coordination Centre.⁽⁷⁹⁾

Conclusion

This paper shows that a long-term aspiration based on a perception of victimisation by other countries taking advantage of China's restrained foreign policy has coalesced into a more coherent plan under the strong lead-

ership of Xi Jinping. Of course, as noted in the introduction, because evidence is difficult to collect, any conclusion is necessarily based on interpretation and is open to debate. Even so, the paper identifies three important developments in China's maritime policy.

First, coordination between maritime actors is improving, and this is an important trend. China's maritime actors may be in competition, but not to an extent that could disrupt China's overall strategy. At least they are working under the broad policy direction of the CCP, and it is therefore the CCP leadership that is pushing the tough policy line in the SCS. In this regard, Xi Jinping's role is important. He has chosen a tougher policy line than his predecessors and it clearly affects the behaviour of maritime actors. His consolidation of power has contributed to his enhanced role. At the same time, institutional reforms initiated under Xi have generated friction and passive resistance among institutions such as the CCG and PLA. For example, Linda Jakobson mentioned that the newly established CCG has not achieved real integration of law enforcement activities.⁽⁸⁰⁾ It is also still unclear whether military reform has been as successfully implemented as Xi anticipated. Moreover, conventional wisdom suggests that China's politics becomes unstable around the time of the Party Congress because power struggles within the party tend to intensify as the Congress approaches. This may affect policy coordination among maritime actors.

Second, the role of the PLA is operationally salient. In both case studies, the PLA was the centre of coordination between various actors. On the other hand, it is unclear what role the PLA took in the policy decision-making process. Given Xi Jinping's consolidated power and his decision-making style, the PLA's influence should not be overestimated.

Third, the mid- to long-term trend is crucial when analysing China's behaviour. In the oil rig case, the CNOOC's project to explore energy, combined with a sense of crisis on China's sovereignty claims, contributed to shaping the background for a tougher policy. In the land reclamation case, the strategic decision to establish Sansha City and local governments' efforts to materialise it contributed to the current policy, the objective of which is to enhance sovereignty claims, not only for the sake of domestic nationalism but also to diminish US influence in the region by creating a fait accompli.
