

ALGORITHMIC TRADING

Stealth Trading, Anonymity, Reduced Market Impact

CA Cheuvreux's trading teams have been developing algorithms since 1998. We have invested heavily to enhance our models with a range of sophisticated trading strategies, which are thoroughly tested and used daily by our trading teams worldwide.

Whether you are looking for stealth trading, anonymity or reduced market impact, we have an appropriate strategy to increase your productivity and extend trading capacity.

Your needs

Our solutions

ANONYMITY

We guarantee that your orders and strategies remain entirely anonymous **by blending access through multiple gateways**. Algorithmic orders are completely isolated from other areas of our business.

INCREASED PRODUCTIVITY

We increase the efficiency of trading **by using our full range of algorithms to automate the execution of less complicated** orders, freeing up traders to concentrate on their most complex trades. Our tools help you trade in line with the market, capture liquidity, increase alpha return and define the best strategies.

DECREASED MARKET IMPACT

We decrease market impact **by using our algorithms to break down large orders, rather than hitting the market with higher-volume transactions**.

CUSTOMISATION

We customise our offer to your needs **by relying on our pool of experienced traders, IT engineers and quant analysts to develop in-house systems and models**. Our independence from third-party software providers means we can quickly adapt to client demand and provide bespoke solutions.
